Patented

Anker 9300 key profiles are patented until 2015. This patent will prevent other manufactures from taking advantage of the unique key profile/keyway matching technology used to develop Anker's system.

Secure

The security of any key lies in the excellence of the technology and the control of the supply of key blanks, The subtle variations of the 750 key profiles of Anker 9300 series make them extremely difficult to copy. A key blank must not only enter the keyway: it must position itself correctly within a tolerance of four thousandths of an inch to work properly. The availability of all Anker 9300 key blanks is tightly controlled. Contracted Anker dealers are authorised to hold only certain profiles. No other key cutters are allowed to buy Anker 9300 key blanks.

A Master Key

Your Anker dealer is highly trained to be able to provide appropriate locking arrangements for all circumstances. If you require locks for an office suite, a factory, a college ect. They can plan and assemble a master keyed suite that will give maximum convenience to authorised user: every key will enable its holder to operate only those locks he/she is allowed to operate. An appropriate master keyed suite can give security and efficiency to any organization - from large institutions with hundreds of key holders to small local businesses with half a dozen people.
